Listing of the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the

application:

1. (Currently Amended) A method for managing a marketing campaign,

comprising:

providing a data mining engine capable of being trained with training data; and

capable thereafter of performing inferences relative to the training data and on

additional data;

providing a user database containing observed characteristics of each one of a

set of users, the characteristics comprising at least one of: (a) at least one of the user's

attributes, (b) at least one of the user's preferences;

training the data mining engine with a set of training data comprising the user

database by clustering the user database into different segments of users distinguished

by different states of one or more characteristics;

inputting to the data mining engine a predetermined set of characteristics

including a predetermined set of user attributes likely to pertain to a product to which

the marketing campaign is directed and, in response thereto, obtaining from the data

mining engine a subset of the users in the database having the highest correlation to

the characteristic by determining which of the segments found during clustering of the

user database has the highest statistical correlation to the predetermined set of

characteristics;

determining in the data mining engine a set of prevalent attributes of the subset

of users:

defining a target database of users and determining in the data mining engine a

target subset of users in the target database statistically correlated to the set of

prevalent attributes;

Amendment

Application Number: 09/401,439

MS 115377.01

conducting a <u>presently conducted</u> marketing campaign cycle directed at the target subset of users;

observing responses of the target subset of users to the <u>presently conducted</u> marketing campaign cycle;

forming a focused group of the target subset of users whose observed response was a particular type of response;

determining, in the data mining engine, a group of prevalent characteristics of the focused group of users; and

defining a database to be mined and determining, in the data mining engine, a new set of users in the database to be mined whose characteristics are statistically correlated with the group of prevalent characteristics.

- 2-5. (Canceled)
- 6. (Previously presented) The method of Claim 1 wherein the target database comprises the user database with which the data mining engine has been trained.
- 7. (Previously presented) The method of Claim 1 wherein the target database comprises an additional database not included in the user database, the additional database defining characteristics of a set of new users.
 - 8-9. (Canceled)
- 10. (Previously Presented) The method of Claim 1 wherein the database to be mined comprises the user database with which the data mining engine was trained.
- 11. (Previously Presented) The method of Claim 1 wherein the database to be mined comprises the target data base of users.
- 12. (Previously presented) The method of Claim 1 wherein the database to be mined comprises a new database not included in either the user data base nor in the target user database.
 - 13. (Previously presented) The method of Claim 1 further comprising:

 directing a subsequent marketing campaign cycle to the new set of users.

Amendment

Application Number: 09/401,439

MS 115377.01

14. (Canceled)

15. (Previously presented) The method of Claim 1 wherein the user preference

corresponds to a prior purchase of a product which is a subject of the marketing

campaign.

16. (Original) The method of Claim 1 further comprising:

determining, in the data mining engine, a complete set of statistically prevalent

user attributes of the subset of users;

for any member of the subset of users having certain attributes which are

undetermined in the user data base, filling in the certain undetermined attributes with

the corresponding ones of the complete set of statistically prevalent user attributes of

the subset of users.

17. (Previously presented) The method of Claim 1 further comprising:

for any member of the target subset of users having certain attributes which are

undetermined, filling in the certain undetermined attributes with the corresponding

ones of the set of prevalent user attributes of the subset of users.

18. (Canceled)

19. (Previously Amended) The method of Claim 1 wherein clustering comprises:

providing with a visualization tool a tabulation of characteristics of each cluster

with the probability of each characteristic in the cluster;

labeling each cluster with a statistically predominant characteristic thereof in

accordance with the tabulation.

20. (Previously Presented) The method of claim 19 wherein the statistically

predominant characteristic of each cluster distinguishes the cluster from the other

clusters.

21-57. (Canceled)

58. (Currently Amended) A machine-readable medium having instructions stored

thereon for execution by a processor to perform a method comprising:

Amendment

Application Number: 09/401,439

providing a data mining engine capable of being trained with training data and capable thereafter of performing inferences relative to the training data; and on additional data;

providing a user database defining the observed characteristics of each one of a set of users, the characteristics comprising at least one of: (a) at least one of the user's attributes, (b) at least one of the user's preferences;

training the data mining engine with a set of training data comprising the user database by clustering the user data base into different segments of user distinguished by different states of a characteristic;

inputting to the data mining engine a predetermined set of characteristics including a predetermined set of user attributes likely to pertain to a product to which the marketing campaign is directed and, in response thereto, obtaining from the data mining engine a subset of the users in the data base having the highest correlation to the characteristic by determining which of the segments found during clustering of the user database has the highest statistical correlation to the predetermined characteristic;

determining in the data mining engine a set of prevalent attributes of the subset of users;

defining a target database of users and determining in the data mining engine a target subset of users in the target data base statistically correlated to the set of prevalent;

conducting a <u>presently conducted</u> marketing campaign cycle directed at the target subset of users;

observing responses of the target subset of users to the <u>presently conducted</u> marketing campaign cycle;

forming a focused group of the target subset of users whose observed response was a particular type of response;

Amendment

Application Number: 09/401,439

determining, in the data mining engine, a group of prevalent characteristics of the focused group of users; and

defining a database to be mined and determining, in the data mining engine, a new set of users in the database to be mined whose characteristics are statistically correlated with the group of prevalent characteristics.

59-64. (Canceled)

Amendment
